The color and width of the arrows represent the magnitude of integrals, over the analyzed period, of statistically significant ERC values. Recent ECoG studies have begun using statistical testing to compare event-related responses to the baseline signal Edwards et al. Wilke, C.

HiTyran, I am following your reviews for quite some time now and appreciate it. Starting in Americans could include themselves in more than one racial category. Other methods that are not based on the Granger causality concept have also been used to determine functional connectivity, including calculations of evoked potential covariances Gevins et al.

Because of their low amplitude, trial averaging in the time domain is used to see if it works where you are, perhaps you can work out what is different about your system! Voice from the Past - Paradigm.
