And the medical industry says they don't know the cause of any of these conditions, but they can schedule you for regular check-ups, sell you drugs, and perform surgery when needed. This content does not have an Arabic version. The Public Education Council improves the quality of resources the Foundation provides.

It is rare, but more common in women between age 40 and 50. Ultrasounds are not quite as good, but because they don't use radiation, they are the first choice for children and pregnant women. Kidney Stones doctors also use ultrasounds to follow up on kidney stones. The kidney attempts to protect itself by producing less urine, but permanent damage may occur if the blockage is prolonged. These procedures generally work well, solving the problem in about 9 out of 10 patients, although sometimes lithotripsy

procedures need more than one session.

Diverticulitis cannot be prevented, but all patients should be encouraged to

bladder stones more difficult for pregnant women?
